
amazon.in
(some loadbalancer Public IP)
CDN / WAF
If there is not present like
cache miss and not cache hit, then the
request actually reaches loadbalancer
LoadBalancer
The request can go to any server, it depends on
something
Frontend Server 1
has files related
to Home, products,
cart,
payment/checkout,
settings
Frontend Server 2
has files related
to Home, products,
cart,
payment/checkout,
settings
Frontend Server 3
has files related
to Home, products,
cart,
payment/checkout,
settings
Public Subnet
Request
getProducts(), getCart(),
Response
checkPaymentStatus(),buyNow()
Backend Server 1
Database query-
mongoose(like
stock_count--,
insert a new order
entry)
Backend Server 2
Database query-
mongoose(like
stock_count--,
insert a new order
entry)
Backend server 3
Database query-
mongoose(like
stock_count--,
insert a new order
entry)
Private Subnet/ Backend Application Code
Database Server 1
Read replica 1
products
table(contains
stock_count
attribute),
order
table(contains
payment_id,
payment_status,
payment_mode, etc
attributes),
cart table,
users table
Database server 2
Read replica 2
products
table(contains
stock_count
attribute),
order
table(contains
payment_id,
payment_status,
payment_mode, etc
attributes),
cart table,
users table
Database server 3
write replica
products
table(contains
stock_count
attribute),
order
table(contains
payment_id,
payment_status,
payment_mode, etc
attributes),
cart table,
users table
